HÀ GIANG / VIỆT NAM

Developing the value of Vietnamese tea.

Connecting the character of tea at origin with the requirements of its market. Building on family tea-making experience and processing in Hà Giang, Hoàng Long develops products and supply proposals for importers, distributors and beverage businesses.

Reference edition based on the public catalogue on 23 October 2026. Pack specifications, price, available quantity and delivery timing must be confirmed for each enquiry.

01 / THE TEA HOUSE

Tea at origin. Possibilities across markets.

The value of tea extends beyond its growing region or an appealing sample. For a business buyer, flavour, grade, price, packing and supply capability must work together. Hoàng Long connects Northwest Vietnamese tea selection with processing at Tân Lập, Hà Giang: turning the character of the leaf into a range that buyers can evaluate, bring to market and reorder.

EXPERIENCE

Making tea since 1995

The foundation of the Hoàng Long family's tea-making experience.

INDICATIVE PRODUCTION CAPACITY

50-100 tonnes/month

Declared by Hoàng Long; product mix, available volume and timing are coordinated against the production plan.

PROCESSING & EXW COLLECTION

Tân Lập · Hà Giang

Hoàng Long Tea Factory. The Hanoi commercial office and warehouse are a separate location.

COMMERCIAL SCOPE

Ingredients · Distribution

Tea for F&B applications, specialist ranges and export-market development.

Processing line from the Hoàng Long profile

Understand the material before choosing the grade

Region, harvest season and leaf form influence appearance, liquor colour and flavour structure. Selection therefore starts with the character to preserve and the application to achieve, rather than the product name or price per kilogram alone.

Processing with an intended use

The range includes green, black and scented teas, with Japanese steam-processing technology used in the relevant production method. Product evaluation considers the dry leaf, brewed liquor and performance in the buyer's actual application.

Separate production origins from the traded range

Alongside its Vietnamese tea production base, Hoàng Long supplies selected teas. Each product's origin, processing method and supporting records are reviewed individually; inclusion in the commercial catalogue does not mean every tea is manufactured in Hà Giang.

02 / PRODUCTS & MARKETS

A portfolio built around the buyer's business.

A tea can serve very different markets. We structure the commercial brief around application, segment and route to the consumer before selecting the tea and supply proposal.

01 Tea ingredients for F&B

PARTNERS	Cafés, beverage chains and ingredient suppliers
TEA RANGE	Green, black and scented teas for fruit tea, milk tea or straight-tea recipes.
PROGRAMME APPROACH	Evaluate the brewed base, interaction with other ingredients, tea dosage and cost per serving. Test samples in the partner's recipe before selecting grade and order volume.

02 Ranges for import & distribution

PARTNERS	Importers, wholesalers and specialist tea businesses
TEA RANGE	Shan, green, black, white and selected teas from the current catalogue.
PROGRAMME APPROACH	Build a range by price segment, leaf appearance and flavour; review samples, bulk packing, destination-market requirements and supply timing. Origin information is confirmed for the product and lot.

03 Selections for consumption & gifting

PARTNERS	Tea retailers, business gift buyers and consumers
TEA RANGE	Drinking teas, scented teas, occasion-led selections and available retail formats.
PROGRAMME APPROACH	Focus on flavour experience, product presentation and formats suited to the recipient. Retail ranges are kept separate from PP/PE sacks for ingredient and export orders.

03 / SUPPLY-CHAIN ORGANISATION

From raw material to transaction: a role at each stage.

A supply proposal must connect the place where tea is made with the people who decide to buy it. Hoàng Long structures discussions around four responsibilities, translating market requirements into a product brief and an implementation plan.

01 Select origins & tea lines

Match raw-material character, product family, season and grade to the intended use. Select samples with a clear commercial rationale for buyer evaluation.

WORKING OUTPUT

a sample shortlist and product information for review.

02 Process & prepare goods

Use operations at Tân Lập, Hà Giang as the basis for planning the manufactured lines. Balance product mix, volume, packing and timing; distinguish available stock from goods requiring production.

WORKING OUTPUT

an order-specific lot proposal and goods-readiness schedule.

03 Coordinate commercial execution

The export development contact and Hanoi office receive requirements and coordinate samples, quotations and contract details, with clear responsibilities for delivery and documentation.

WORKING OUTPUT

a commercial proposal and a division of responsibilities.

04 Develop the destination market

The partner leads its sales channels and local import requirements. Feedback on applications, price and demand informs range adjustments and planning for subsequent shipments.

WORKING OUTPUT

product feedback and a repeat-supply brief.

04 / TECHNICAL PROCUREMENT BASIS

Four areas to examine before placing an order.

The working specification is developed for the product and intended use. Parameters below are evaluation topics, not existing test results or certifications for every product.

01 Sensory character & application performance

Compare leaf appearance, uniformity, aroma, liquor colour and taste against the reference sample. For beverage use, record tea dosage, water, brewing time and accompanying ingredients so results can be compared under the same conditions; assess cost per serving alongside raw-material price.

02 Specifications & market requirements

Identify relevant parameters, such as moisture, pesticide residues, microbiology or heavy metals where required. Applicable limits, methods, laboratory and sampling timing must be established for the importing market and specific lot.

03 Lot identification & packing

Review product name, lot code, net weight, sack type and label information. Choose 20, 30 or 35 kg PP/PE sacks to suit leaf form and intended use; include storage, loading and protection from moisture and odour in the delivery plan.

04 Goods readiness & delivery records

The pre-delivery review should cover volume, packing condition, vehicle/container, photographs and agreed documents. Invoices, packing lists, transport and origin documents or other records are established for the actual transaction; not every document applies to every order.

05 / COOPERATION AGENDA

Cooperation starts with an actionable brief.

For buyers, associations and trade-promotion bodies, Hoàng Long proposes starting with a defined market objective and product group. A useful meeting should lead to a sample shortlist, assessment scope or trial-shipment plan, with responsible contacts and practical milestones.

01 Import & distribution

Select tea families and segments, assemble samples and propose packing. The next decision is their fit with sales channels, import requirements and a first-shipment plan.

02 Applications & range development

Work with F&B or specialist-tea partners to define the flavour base, usage criteria and target price range. Sample trials narrow the selection before volume and procurement decisions.

03 Trade promotion & site assessment

Prepare product presentations, buyer-meeting agendas and factory visits where appropriate. Distinguish introductions, capability assessment and each party's transaction commitments.

Brief for the first working meeting

01 Convening organisation, responsible contact and meeting objectives

02 Market, buyer audience or distribution channel

03 Tea range, application, technical requirements and planned volume

04 Schedule, meeting location and documents for review

05 Next action, responsible person and how results will be assessed

06 / DEVELOPMENT DIRECTION

Our direction: grow value as well as volume.

Hoàng Long aims to build supply relationships that give buyers a basis for long-term business and connect tea development with defined market demand. Three priorities guide product and cooperation decisions.

01

Translate origin character into product value

Connect origin information and processing character with buyer choice. Develop distinction through application and segment, rather than competing on raw-material price alone.

02

Build the conditions for repeat business

Bring sample and application feedback into the supply brief, clarify formats and goods planning, and give partners a basis for anticipating their next procurement cycle.

03

Develop markets through suitable partners

Work with importers, distributors and trade-promotion organisations on specific briefs. Start with trials that have clear evaluation criteria, then expand according to implementation results.

Regional character. A purpose for the product.

Northwest Vietnam's highland tea, including Hà Giang, underpins Hoàng Long's Vietnamese tea lines. Raw-material character creates value when selection and processing serve a defined purpose: preserving distinction for tea drinkers or providing a suitable base for beverage recipes and distribution.

07 / EVIDENCE & DUE DILIGENCE

From company introduction to due diligence.

Partners can agree a document-review scope around the product, market and cooperation objectives. Transaction records and customer information are shared privately within the permitted scope.

01 **Entity & responsible contacts**

Company identity, tax number, responsible contacts and transaction authority are reviewed before signing.

02 **Production & origins**

Actual photographs, processing steps, the basis for volume planning and product-origin information relevant to the assessment.

03 **Products & quality**

Samples, specifications and any available test results, with their date, lot and applicable scope.

04 **Delivery experience**

Completed-shipment records, transport documents or delivery acknowledgements where disclosure is permitted; customer information is not published automatically.

EXPORT / LARGE-BULK PACKING

PP/PE sacks · 20 / 30 / 35 kg. Adjustable to the tea's form or the buyer's intended use; confirm the specification for each order.

08 / RANGE STRUCTURE

A range for different needs

Start with how you plan to use the tea. Choose a relevant group, test it in your working conditions and confirm the pack specification with Hoàng Long.

Green tea

Compare colour, strength and finish using your intended brewing method. For iced tea, share your tea, water and ice quantities.

Black tea

Compare samples for strength and aroma in your actual recipe. If using milk or fruit, test with your own ingredients.

White tea

Start with the sample brewing guidance, then adjust for your application. Discuss the required grade and leaf specification before ordering.

Scented tea

Select lotus, jasmine or orchid, then evaluate the balance of scent and tea in your brewing method.

Pu-erh tea

Choose cake or piece format. Confirm the weight per unit and number of cakes/pieces; do not convert to kilograms without an agreed unit weight.

Other teas

Discuss your application, grade and packing to select a suitable sample.

EXPORT / LARGE-BULK PACKING

PP/PE sacks · 20 / 30 / 35 kg. Adjustable to the tea's form or the buyer's intended use; confirm the specification for each order.

09 / TEA CATALOGUE

Product catalogue

Listed brewing guide
80-85°C · steep 10-30 seconds

Open a tea page or request a quote to confirm the pack specification and batch.

10 / COOPERATION CONTACT

From first discussion to a supply programme

Each stage should provide enough information to decide the next step. This approach helps reduce gaps between the selected sample, the ordered goods and the conditions of delivery.

1

The procurement brief

Define the market, channel, application, price segment and expected volume. The result is a sample shortlist and the technical and regulatory questions to resolve before a formal quotation.

2

Samples & acceptance criteria

Evaluate taste and application; record the sample, grade, brewing conditions and testing parameters. Where a factory visit is needed, prepare the assessment around the product and procurement objectives.

3

The lot & commercial terms

Confirm volume, price, packing, labels, payment, goods-readiness milestones and required records. For EXW Tân Lập, Hà Giang offers, identify the parties responsible for loading, transport and formalities separately.

4

Delivery & the next supply cycle

Reconcile volume, packing, goods condition and documents against the order. Use delivery and application feedback to plan repeat supply, building on the previous evaluation rather than starting again.
